DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: on page 1, the Applicants are requested to update the copending application serial numbers. Appropriate correction is required.
2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

3. Claims 1-22 are objected to because of the following informalities: in claim 1, lines 13, 27 and 30, "[+1,+1]" and "[-1,-1]" are suggested to change to "(+1,+1)" and "(-1,-1)". Also suggest the same changes to claims 3, 5, 7, 13, 15, 17, and 19. Wherein the dependent claims 2, 4, 6, 8-12, 14, 16, and 20-24 depend upon the independent claims 1 and 13. Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1 and 13, "S", "M", "N", "S", "kth", and "ith" are undefined.

In claim 1, lines 11-12, 24, and 29, the Applicants are requested to clarify the difference of "a logic 00 value". Also see claims 2-7 and 14-19 for "a logic 01 value", "a logic 10 value", and "a logic 11 value".

Wherein dependent claims 8-12 and 20-24 depend upon the independent claims 1 and 13.

Allowable Subject Matter

6. Claims 1-22 would be allowable if rewritten or amended to overcome the objections and the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

7. The following is a statement of reasons for the indication of allowable subject matter: Haines discloses a demodulator circuit comprising clock delay lines and a switch enable signal to enable one of a plurality of switches to generate a demodulated signal. However, the prior art fails to show or suggest a demodulator comprises the combination of a storage array capable of storing S logic 00 code masks, each of the S logic 00 code masks associated with one of the S orthogonal modulation codes, wherein a kth logic 00 code mask comprises M/2 logic 00 code mask bits, each of the M/2 logic 00 code mask bits is associated with a corresponding one of M/2 sequential

pairs of M binary bits in a kth orthogonal modulation code, wherein the each M/2 logic 00 mask bit is a logic 1 if the corresponding sequential pair of the M binary bits in the kth orthogonal modulation code is equal to the logic 00 value and is equal to logic 0 otherwise and a decision circuit capable of detecting a (+1,+1) signal output by the logic 00 input detector after a comparison of a jth sequential pair of the M/2 sequential pairs of the M binary bits to the logic 00 value and, in response to the detection, adding the (+1,+1) signal to a jth one of the M/2 logic 00 code mask bits in the logic 00 code mask in the storage array is equal to 1.
